Senior DevOps Engineer 1230

Description

Not your typical Sr. DevOps Engineer role (one who started in networking or systems and progressed to a DevOps Engineer). We have the infrastructure side covered, but are looking for someone with a Development background (preferably Java but not limited to Java, candidates must have more experience than .Net development experience as the skills do not translate well in our environment). Candidates will need to have excellent communication skills and comfortable with holding meetings with up to 30 developers at a time and also communicate with all levels in various departments and Management.

Responsibilities

Outcomes & Activities:

- Accelerate IT efforts by supporting the tools to automate manual processes
- Decrease demand for night-time IT work by ensuring our automated processes are fault tolerant.
- Configure and extend our tools to satisfy the needs of all users (application delivery, middleware, database administration, etc.)
- Integrate our tools with others (like Jira) to ensure easy visibility into the location of our code
- Help troubleshoot problems to deployments that teams have made using our toolset
- Handle many ongoing conversations originating from a variety of mediums
- Keep the solution up to date and train users on upcoming features
- Provide a positive experience to every client in every interaction Remain compliant with our policies, processes and legal guidelines

Qualifications

Requirements:

- Excellent communication skills is a must. The person in this role will lead meetings with stakeholders and various departments within IT
- Bachelor's degree in Computer Technology or closely-related field of study or equivalent experience
- 3+ years of IT experience
- 3+ years of software development or scripting experience (Java, C#, Python, Bash, PowerShell, etc.)
- Experience managing build and continuous integration tools (Jenkins, Hudson, TFS Team Builds, etc.)
- Experience managing release or continuous delivery tools (Jenkins Blue Ocean, Bitbucket Pipelines, TFS Release Manager, etc.)
- Experience with application server technologies (Tomcat, WebLogic, JBoss, WebSphere, Glassfish, Oracle Application Server)
- Able to participate in a 24 hour, year-round on-call rotation
- Attendance as outlined in the department attendance policy
- Work onsite at the assigned location
