## Senior Programmer 1224

### Description

The Senior Programmer's role is to maintain software applications and ensure business requirements are met through constant analysis, testing, and development of software applications.

### Responsibilities

#### Essential Functions:

1. Consistently write, translate, and code software programs and applications according to specifications as well as write programming scripts to enhance functionality and/or performance of company applications as necessary.
2. Collaborate with developers, programmers, engineers and designers in conceptualization and development of new software programs and applications.
3. Analyze and assess existing business systems and procedures.
4. Define, develop, and document software's business requirements, objectives, deliverables, and specifications on a project-by-project basis in collaboration with internal users and departments.
5. Define software development project plans, including scoping, scheduling, and implementation.
6. Research, identify, analyze, and fulfill requirements of all internal and external program users.
7. Liaise with network administrators, systems analysts, and software engineers to assist in resolving problems with software products or company software systems.
8. Design, run, and monitor software performance tests on new and existing programs for the purposes of correcting errors, isolating areas for improvement, and general debugging.
9. Administer critical analysis of test results and deliver solutions to problem areas.

#### Key Competencies:

1. Tech Savvy
2. Resourcefulness
3. Action Oriented
4. Drives Results
5. Strategic Mindset

### Qualifications
