Sr. Systems Engineer 1234

Description

Our Infrastructure team is responsible for implementing and managing over 300 Windows servers in both physical and virtual (VMWare) environments. The team is responsible for providing 24x7 availability of information systems to the business functions. The environment is primarily Windows Server 2016 with some 2008 R2 and above systems. Additionally, the infrastructure team is responsible for designing and implementing project solutions to support business initiatives.

We are seeking a Senior Systems Engineer to with expertise experience in Microsoft Windows Server with technical experience in other infrastructure technologies. This includes but is not limited to Active Directory, Group Policy, DNS, Windows Server (sizing, performance tuning, monitoring, patching, and hardening), virtualization, storage, datacenter hardware, backup systems, disaster recovery, Office 365, Azure, SQL, and core networking fundamentals (WLAN, LAN, WAN).

Responsibilities

- Evaluate, propose, design, develop, deliver and support the Windows Server environments
- Work on several projects to standardize the infrastructure operations
- Work collaboratively with team members to architect and deploy new systems, support and maintain current systems
- Design, install, implement, and manage Windows server operating systems
- Serve as an escalation point for issues for production environments and provide 3rd level support
- Support server infrastructure at the datacenter and at remote office locations
- Design and develop automation where necessary to simplify administrative tasks (Powershell or other)
- Work on projects that include business stakeholders to provide the needed infrastructure to support business and application projects
- Develop and maintain related documentation for technical standards, policies and procedures for all supported services
- Provide technical mentorship to level 1 and level 2 team members as necessary
- Work with the infrastructure architects and managers to implement new systems and systems designs
- Work on infrastructure security projects
- Evaluate the environments and operational practices to provide recommendations on remediation of risk areas
- Provide excellent customer support to the business
- Other duties as assigned

Qualifications

- Bachelor's degree in Computer Science, a related field, or equivalent experience.
